Brake Support Bracket

Available : Fabricated steel assembly.

Also see Pagid front brakes and STI 4 spot caliper kits. ALL PICS ON WEB SITE (above)

Benefits:

How the Kit Works.

Modern day cars are designed to cost less and weigh less. The "fire wall" that the brake master cylinder is bolted to, actually flex's under braking due to its narrow gauge thickness. The heavier the brake effort the more it flex's. This flex "adds" to a spongy brake peddle "feel".

By using some smart rally design, work MRT has come up with a simple yet effective brace that REDUCES THIS FLEX BY OVER %50

The kit bolts to existing bolts that already exist and is fully adjustable.

The result? Better brake effectiveness, instead of flexing the fire wall you actually exert more effort DIRECT to the brakes. Try it you will be surprised!

Features:

- Simple installation (10 minutes)
- Bolts to existing chassis mounts
- Every part included simply use your tools to fit.
- Fully adjustable to maximise benefit

MRT Performance. For Daihatsu, Subaru & Honda.
